

TOKAI DENPUN CO.,LTD.

CORPORATE GUIDE BOOK

Tokai Denpun Co., Ltd.

Tokai Denpun Co., Ltd., started business in 1947 for the purpose of selling starch products. Since then, taking advantage of diversification in starch uses, we have handled a large number of products through our customers and business partners related to "food" in various industries and categories, explored and developed new production areas and new products both in Japan and overseas, and deployed proposal-based sales that add new features and functions as solutions to customer challenges nationwide. Today, we have domestic sales offices in nearly every prefecture, expanding our business to procurement and supply of raw materials, processing by contract manufacturing, intermediate distribution, and retail, and because we can respond with flexibility and speed to various customer needs, this advantage serves as a driving force in our further growth.

The TDC Group develops its business globally, with seven companies in Japan engaged in agricultural product processing/manufacturing (Sunny Foods, Star Agri, and Sanwa), marine product processing/manufacturing (Tokai Seapro, Marugo Suisan, and Kushimoto Shokuhin), and sales and distribution (Kuwamura Sanko), and also includes overseas raw material procurement bases in Nine countries (the U.S., China, Taiwan, Thailand, India, Vietnam, Indonesia, the Netherlands and Lithuania), as well as internal sales bases in five countries (the U.S., China, Taiwan, Thailand, and Vietnam), in an effort to develop cooperative manufacturing-sales relationships with Tokai Denpun Co., Ltd. In addition, the Group includes a system management company (TDC Service) and a business coaching company that develops human resources (Coach TDC) and strives to provide support both internally and externally.

In recent years, uncertainty about the future that is beyond our collective experience prevails, although the food industry overall remains unchanged. However, changes in the food industry, the way food ought to be, as well as how we access food will undergo significant changes, and I think it is important that we anticipate changes and determine business continuity while we transform our business to better respond to changing needs ahead of our competitors. From now on, our company-wide sales strategy must be focused on "market-oriented" and "development of undeveloped markets." Based on our TDC Group DNA of constantly challenging new things for the future, we continue to advance our efforts at providing solutions to our customers' challenges.

At the same time, society in general is becoming increasingly aware of environmental measures, including ESG and SDGs, as well as sustainable businesses and products. I think it is also important in the future to promote activities in these areas and ensure safety and security from the perspectives of compliance, quality assurance, quality control, and other initiatives. What we can do may be a small step, but we should continue to promote our efforts on a company-wide basis. Then, as a company required by society, every one of us must improve the ability to communicate and act, and commit ourselves wholeheartedly to further growth as an organization.

I sincerely appreciate your continued support and ask for encouragement in the future.

President

葉山 裕

Hiroshi Hayama

Corporate Philosophy

The TDC Group appreciates the blessings of nature, pursues every value that food brings to us, and contributes to the realization of an affluent society.

Management Philosophy

We pursue fair profits through sound business practices and realize co-existence and co-prosperity with our customers, clients, employees, stockholders, society, and the environment.

We value independence and autonomy and create an environment where employees can work with high aspirations and achieve satisfaction.

Our corporate culture makes it possible for the company to read changes and our employees to create far-sighted, innovative ideas with flexible and free mindsets.

Six Courses of Action of the TDC Group

1. We think from the standpoint of our customers (consumers, clients, and suppliers) to provide safe, secure food materials.
2. We observe all laws, regulations, and social norms as we carry out our business in a sincere and fair manner.
3. We disclose information in an appropriate and fair manner and conduct highly transparent operations.
4. We value each person's personality and independence and make every effort to create a comfortable workplace environment.
5. We remain aware of our responsibilities as a good corporate citizen.
6. We pursue new value and make the best of it in addressing our business.

Tokai Denpun—started the business by trading starch.
 As a result of responding to customer needs for starch related products,
 we have now grown into a trading company
 handling a variety of different kinds of food across the world.
 Let us know of any foodstuffs you desire.
 We will deliver it to you as needed.

Four Strengths of The **TDC** Group

Network

Business partners all over the world
 We strive to expand
 our business bases

TDC Group has offices in nine countries: the U.S., China, Taiwan, Thailand, India, Vietnam, Indonesia, the Netherlands and Lithuania. We also have trading bases around the world and promote development and the importation of products that satisfy the various customer needs.

Products Handled

The entire world is
 the market for our
 products handled

We deal with a wide range of products from the sea and earth all over the world, including agricultural and livestock products, such as starch and vegetables, minced fish, frozen fish and fresh seafoods. Also, our business field extends to all food-related fields, including package materials, machinery and feed and fertilizers.

Quality Assurance

Safe and secure is
 the basis of all

We have the Quality Assurance Division in place in order to deliver safe and secure foods to you as needed, and have QA personnel in all the divisions inside and outside the country for thorough product management from both the quality assurance and control perspectives.

Joint Development

Total proposal of
 technology support & taste

We solve issues on new product development and during production, such as application development, how to approach innovative technologies, and application to production lines from the technology perspectives. We also hold technology networking events and make proposals on approaches to solve issues and application functions.

TDC Group in Numbers

These are the numbers having grown since our foundation in 1945 after 75 years of our history. The Group will continue expanding the field of our activities utilizing the size of the group.

WORLD AREA

24 sites in 9 countries overseas

The Tokai Denpun Group has 24 sites in nine countries, including the U.S., China, Taiwan, Thailand, India, Vietnam, Indonesia, the Netherlands and Lithuania, and actively engages in the overseas business to develop and import new ingredients. The Group also provides the sales business in the domestic market of each country and is engaged in a global-scale business.

Quality Assurance

Quality assurance is the most significant issue for companies handling foods. In order to respond to increasingly demanded consumers' security and safety, TDC has the Quality Assurance Division under the direct control of the president.

Research & Development (R&D)

We face customers issues from raw materials to the final product and help solve problems.

Quality assurance system

As a company that handles foods, securing the safety of the products handled is the most important priority. We have the Quality Assurance Department in place to ensure the safety of the products handled throughout the entire Group by assigning a person in charge of quality management with quality management personnel in each office.

Internal training

Our individual employees associated with foods are also required to have knowledge of quality control and assurance. With an aim to raise the level of quality control ability across the company, we conduct quality management training and separate study sessions for employees as a part of the activity. In addition, for employees qualified for food safety we have a subsidy program for expenses to encourage the acquisition of qualifications.

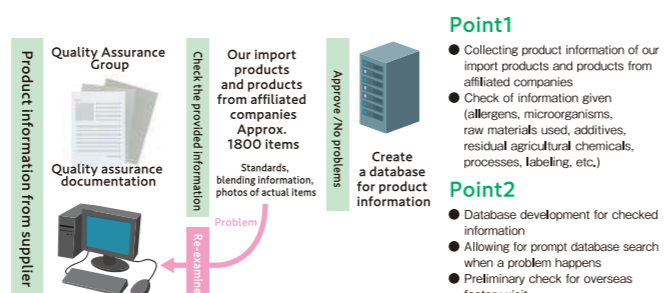

Overseas factory audits

The Quality Assurance Group conducts factory audits of overseas suppliers, checks operations and the management documents at manufacturing sites, and provides advice and suggestions for improvements when necessary. In cases where on-site visits are not possible, audits are conducted remotely, and our local staff and supplier's factory staff visit the production site and inform the auditor of the operational status and documentation management status, and the auditor conducts safety evaluations and offers advice and suggestions for improvements to the production site. Thus, we are working with our suppliers aiming to improve quality assurance.

Check for product safety

The Quality Assurance Group checks information on our quality assurance documentation filled in and submitted by domestic and international suppliers. Our personnel check domestic food related regulations, the raw materials used, management standards and labels for the products, and save the product information as data to manage.

Research & development laboratory

The R&D laboratory started with the basic research and analysis of starch and has developed new processed starch. It now engages in product development, application building, and product menu development according to it based on starch features in line with customer needs as the Product Development Division of the entire Tokai Denpun Group.

Development policy

We capture market trends by utilizing the raw information obtained from information exchanges with customers, market research, and POS data and engage in product development and applications building towards the development trend obtained. Our R&D laboratory is equipped with analytical instruments to extract and clarify any issues backed up with analysis data accumulated from the past and to establish and verify hypotheses derived from the issues. It also asks customers to actually visit the lab and creates prototypes together for prompt product development.

Key development themes

Processed starch, starch mix, mix for commercial-use, rice flour mix, additive preparations, seasoning, processed meal product, seafood processing, meal kit, instant prepared food, etc.

Development department

Tokai Denpun, which always looks forward to the next generation and explores new fields, offers a diverse range of foods worldwide and opens up the future by putting its efforts into new business development.

Overseas Group

Tokai Denpun Group has 24 sites in nine countries overseas and globally operates by collaborating with the domestic business. At overseas group companies, local personnel promote our global business.

Wide-area Group

The Wide-area Group offers prompt and accurate information to large food companies with factories across Japan. We offer proposals on product procurement not only within our group companies but also for customers through a nationwide network and engage in activities to improve services and customer satisfaction.

Development Group

The Development Group promotes new business development and immediately responds to market needs to provide the planning and development based mainly on foods distributed by the Tokai Denpun Group. It performs attractive product planning and analyzes the market based on customer and market needs and engages in business development across the world.

Sales Department 1

Major Products Handled

Product information

We deliver nourishing foods from the earth blessed by the sun and rain to you as needed.

From product development of raw materials that include our main product, starch, which our company name is based on, sugar, wheat, seasonings and oils and fats, and sub-materials, to vegetables, rice, beans, and such beverages as tea, as well as high value meat products considering the production environment and cost and high-quality grass. We supply the various ingredients through the supply route utilizing our global network with a motto of "safe and tasty."

Starch

A pioneer in processing and selling starch, who solves your problems

The history of Tokai Denpun started from processing and selling starch. As a company fully knowledgeable in the uses of starch, of which there are more than 2,000, we can meet various needs including food use and industrial use.

We solve customers' problems through a variety of practical proposals that combine processing by our own factory, starch development capability of the R&D laboratory, and our wide range of material expertise and strengths.

Major products handled

Potato starch, cassava starch, corn starch, wheat starch, sweet potato starch, other starches, starch syrup, glucose, high-fructose corn syrup, and starch sugars

Food Stuff

Providing a wide variety of raw materials and secondary materials to the food-processing sector

We provide raw materials and secondary materials for processed food, such as sugar, wheat flour, oil, fat, dairy products and egg, widely to the food industry, including manufacturers of frozen foods, confectioneries, and bread.

We deliver a wide range of materials from vegetable proteins that contribute to improvements in nutrition and quality and seasonings that maximize flavors to food additives that contribute to the SDGs.

Major products handled

Sugars, wheat flours, oils and fats, eggs, vegetable proteins, alcoholic liquors, seasonings, salt, dairy products, food additives, and other products

Rice & Wheat

Connects to the production areas with the varieties and qualities according to the applications and major grains: rice and wheat

Rice and wheat are the main foods on the Japanese dining table. We deal with milled rice for domestic use, ready-made meal use, and restaurant use and have established a stable supply of a variety of rice and wheat from production areas inside and outside Japan for the raw materials of processed cooked rice, alcohol, rice snacks, miso, and soy sauce. In addition to the establishment of a supply network utilizing our group company StarAgri and partner rice milling factories, we are committed to producing processed rice products that include rice flour and the development of new production areas and breeds in order to respond to further customer needs.

Major products handled

Rice, wheat, rice flour, processed rice products, and edible miscellaneous grains

Nuts & Beans

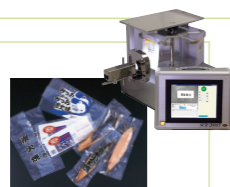

Selected materials and quality, which satisfy the needs of established manufacturers

With our fine-tuned service, we meet the needs of established manufacturers that have been preserving their long-standing tastes, including those of traditional Japanese confectioneries. Using our secure network connected directly from production areas nationwide, we provide a wide variety of edible beans that are used for confectioneries (sweet bean paste), as well as tofu, miso, boiled beans, and snacks. We account for a large share in the industry. We are also engaged in the development of production areas meeting our customers' needs.

Major products handled

Red beans, soybeans, kidney beans, peas, nuts, and other products

Packing Materials

Comprehensively supporting your manufacturing, packing, sanitation, and quality management

We handle wrapping and packing materials that are functional and/or have good designs to safely deliver foods to your customers, as well as food-processing machines, packing machines, inspection machines, and environmental equipment. In order to widely support our customers, we also deal with items for sanitation in food factories, such as detergents, sanitizers, and bacteria-inspection equipment.

Major products handled

Films, containers, packing materials, machinery and equipment, plastic moldings, cleansing and disinfection agents, bacteria inspection equipment, and other products

Agricultural Products

Delivers seasonal vegetables and fruits from domestic and international production sites

With more diversified food needs for food and changing foreign affairs, we respond to customers' demands by procuring products from inside and outside the country in a wide variety of distribution forms, including fresh, frozen, boiled, dried, and salted. Vegetables are mainly distributed to frozen food, prepared food, and pickle manufacturers. Onions, cabbages, and carrots are delivered as fresh; corn, spinach, and bamboo shoots are delivered in frozen form; bamboo shoots, burdock root, and radishes are delivered in boiled form; and dried plums, ginger, and cucumbers are delivered in salted form to the domestic market and in China, Southeast Asia, including Thailand, Vietnam, Indonesia, and India, and Oceania countries through our global procurement network, and we contribute to customers BCP. We also import fruits like apples, strawberries, and yellow peaches from China for canned food and the ingredients of sweets. We also import processed chestnuts from Korea, China, and Italy. We respond to customer demands in a diverse range of industries through our broad product lineup and work on safe, secure product development through the collaboration between the Quality Assurance Division and overseas local personnel to check factories and agricultural fields of our overseas suppliers and provide guidance and advice for improvements for them.

Major products handled

Fresh/Frozen/Boiled/Dried/Salted vegetables, bamboo shoot, raw materials for canned products, canned products, and other products

Feed & Fertilizer

Stably supplies raw materials of feed for fisheries and livestock industries and fertilizer for the gardening industry

We deliver fish powder as well as fish bones and fish oils produced in an integrated manner from fishing to formula feed, fertilizer, and pet food industries. Our production areas of grass-related materials are North America, Australia, and Europe, and we also deliver rice straw from China and raw materials for culture media from South-east Asia to producers through our safe and secure supply system.

Major products handled

White meal, brown meal, adjusted meal, fishbones, cured hay, formula feed, single feed, fertilizers, and other products

Meat

Contributes to stable supply of meat raw materials and differentiation of products and sales floors

We engage in developing meat raw materials of chicken, pork, and beef from inside and outside of Japan in order to deliver them in an easy-to-use form for our clients. We sell not only raw materials but also heat-processed cut meat considering convenience and hygiene perspectives when used and contribute to manufacturing efficiency and differentiation of products and sales floors by providing proposals on our original products and supporting the development of cooked and processed products.

Major products handled

Chicken, pork, beef, steamed products, and cooked and processed products

Major Products Handled

Product information

We deliver the rich source of lives carefully raised by Mother Sea to the dining table at a high level of freshness.

We have an extensive range of high-quality seafoods from oceans all over the world through our global network. We provide frozen foods and seafoods as raw materials for the processed foods that include minced fish for different purposes, and freshly deliver fresh and farmed fish through our domestic and international production and supply bases based on thorough production management. We also strive day and night to develop distribution networks by focusing on increasing freshness and ensuring stable supply with an aim to providing high-quality products that meet customer needs.

Kneaded Fisheries Products

Boasting No.1 dealer in Japan

We deliver high-quality, stable Surimi from partner-related suppliers in over ten countries worldwide. Surimi has now become a word known throughout the world, and it is getting difficult to provide stable procurement every year due to the increase in demand. TDC will ensure stable procurement around the world and make proposals to customers by flexibly responding to the volumes of landings and resources from all over the world and prices.

We are enhancing the business platform by setting up our offices in supply bases, increasing the speed of information collection from production areas, and ensuring smooth communication with suppliers.

Major products handled Minced fish products (for domestic and export), and other products

Frozen Fish

Reliable product making meeting the needs of the times

As fish and seafood have been attracting attention as healthy food and increasingly demanded all over the world, the needs for fisheries products with reliable quality have become greater than ever before. We directly import fresh materials that have satisfied us after our staff members going to all over the world, including Alaska, Norway, Canada, China, Thailand, and Vietnam, and inspecting them with their own eyes. By processing them in third countries, we deliver you a wide variety of products with higher added value.

Major products handled

Southern fish, northern fish, muscles, fish roes, squids, octopuses, crabs, shrimps, seaweeds, and other products

Processed Eel

A brand giving first priority to safety and security

We manufacture and sell spitchcocked eel with our own specifications at contracted eel-processing factories in Japan, Taiwan, and China. Giving first priority to safety and security, we established our own management system supervising everything from raw materials to the end product. We have been continuing investigations aiming to produce tasty products that make all customers happy.

Major products handled Processed eel products, processed grilled fish products, and other products

Fresh Fish

Delivering a fresh harvest of the sea to your dining table

We provide farm-raised living fish and fresh fish and processed fresh products from inside and outside Japan, while engaged in aquafarming business aiming to establish a brand. Major kinds of fish from inside Japan that we handle are those indispensable to your dining table, such as adult yellowtail, great amberjack, and sea bream, as well as farm-raised silver salmon that has been attracting attention as fish for sashimi (sliced raw fish) in these few years. We address com-modification in accordance with customers' needs through joint business with local producers.

Major products handled

Processing of raw fish, fresh salmon and trout, natural fresh fish, sweet shrimp, farmed young fish, farmed fish, and fresh fish

Bonito & Tuna

From sashimi (sliced raw fish) to dried bonito

This group handles sashimi products represented by seared bonito, as well as dried-bonito products represented by imported dried bonito. As for sashimi products, we mainly purchase frozen single-hook-fished bonitoes directly from fishermen, and process them into seared bonito or loins at partner factories with excellent sanitation before selling to mass merchants or the eating-out industry nationwide. Additionally, we handle frozen tuna, raw tuna and raw bonito, and import dried bonito from Indonesia. All of the dried bonito we handle, including domestically produced ones, to dried-bonito manufacturers nationwide.

Major products handled Raw bonito, raw tuna, bonito flakes, roasted bonito, loin products, and other products
